

IMPROVE PRODUCTIVITY AND SAFETY BY CREATING A SAFE PLATFORM TO WORK FROM

Designed to provide a **safe working platform that doesn't block access to stairs**, while also acting as a fall prevention system. Stairspan can be used by all trades working on domestic stairs and stairwells during construction and protects workers from falling into stairwells, voids, or down stairways.

INNOVATIVE PATENTED SAFETY SOLUTIONS

STAIRWELL PLATFORM SYSTEM

KEY FEATURES & BENEFITS

- Quick and easy to install in under 10 minutes with just four components
- Temporary work platform and fall prevention system
- Allows easy access and movement in stairwells in this dangerous and awkward area

The StairSpan stairwell protection system increases productivity when working at height in stairwells by providing a safe, sturdy platform to work from whilst preventing falls. Built using lightweight aluminium makes it easy to transport and its flexible design allows for work to continue without blocking access to the stairs. The mat can easily be slid back to allow access for operatives and materials.

Consisting of just four components, it can be easily installed by a single operative and is quick to construct in a matter of minutes. The telescopic frame can be adjusted to many different lengths making it adaptable for even the most complex of stairways.

The StairSpan system conforms to BS.8630:2019 safety standards and comes in two sizes, standard and a compact version. Individual frames can be connected and used in conjunction with handrails, where necessary, to ensure the majority of all staircase layouts and designs can be protected.

AVAILABLE TO **HIRE** AND **PURCHASE**

SPECIFICATION

Compact frame adjusts from	1.4m to 1.9m
Weight	18.8kg
Standard frame adjusts from	2.1m to 3m
Weight	26kg
Maximum work load of both systems	225kg
Width of both frames	700mm

Training and maintenance offered/required.
